A horizontal bitumen storage tank is a type of industrial storage tank specifically designed to store and transport bitumen or asphalt. This type of tank is typically used in the oil and gas industry, as well as in road construction and maintenance, where bitumen is used as a binding agent in asphalt. Horizontal bitumen storage tanks can range in size from a few hundred gallons to several thousand gallons, with a cylindrical shape and a horizontal orientation for ease of transportation and installation. They are

typically made of heavy-duty steel or other durable materials, with insulation and heating systems to maintain the bitumen's temperature and prevent it from solidifying or clogging during storage and transportation. Horizontal bitumen storage tanks may also include features such as pumps, valves, and level gauges to facilitate loading and unloading, as well as safety features such as overflow protection and alarms to prevent spills and leaks. Proper handling and maintenance of bitumen storage tanks is critical to ensure safety and the integrity of the product being transported or stored.
