A horizontal boiler feedwater pump is a type of pump used in steam power plants to feed water into a boiler. It is typically a centrifugal pump that is mounted horizontally and driven by an electric motor or steam turbine. The pump is designed to transfer water from the feedwater tank to the boiler at high pressure and high flow rates, to ensure that the boiler has a constant supply of water. The pump is typically designed to handle high-temperature water, as the feedwater is heated by the boiler before it enters the pump.
