The global Horizontal Brown Oxide Chemicals market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Horizontal Brown Oxide Chemical is a liquid used in horizontal PCB browning treatment process. The brown oxide treatment is one of the methods for refining shiny copper surfaces and increases the adherence to resin. Brown oxidation uses acid and alkali to remove oxides, grease, residual dry film, fingerprints and other foreign matter on the surface of the PCB substrate. Through the chemical reaction between the liquid and the copper surface of the PCB substrate, the roughness of the copper surface is increased, which activates the copper surface and roughens the board surface. The purpose of brown oxidation is to enhance the bonding force between the inner core board and the prepreg.
