## Abstracts

The global Horizontal Dry Evaporators market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

In the horizontal dry evaporator, the liquid refrigerant enters the tube side from the end cover at one end of the evaporator after throttling. The end cover is cast with a partition, and the refrigerant evaporates through two or more processes and absorbs the heat of the refrigerant. After coming out of the same end cover, it enters the compressor. If the end cover diaphragm gasket leaks, it will short-circuit the refrigerant, resulting in liquid return and a decrease in refrigeration capacity. Horizontal dry evaporators are generally made of copper tubes, either bare tubes or inner finned tubes with longitudinal fins.

United States market for Horizontal Dry Evaporators is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Horizontal Dry Evaporators is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
