The global Horizontal Liquid Silicone Rubber Injection Molding Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Horizontal liquid silicone rubber injection molding machines are among the most commonly used types in the industry, featuring horizontal clamping and injection units. Liquid silicone rubber (LSR) material is measured and fed into the injection unit, where it is mixed and then injected into the mold cavity. This design allows for efficient production of complex silicone rubber components. Horizontal LSR injection molding machines are suitable for high-volume production and offer several advantages, including improved ergonomics due to the lower working height, facilitating easy loading and unloading of molds. These machines can accommodate multiple cavities, enhancing efficiency and increasing production capacity. Additionally, they are easier to integrate with automation systems for part handling and post-processing, further boosting the overall efficiency of the production line.
