Horizontal moving walk escalator, often referred to simply as a "moving walkway," is a type of transportation system that facilitates the movement of people over short to medium distances in horizontal or slightly inclined settings, such as airports, shopping malls, and transportation hubs. Unlike traditional escalators that move vertically, moving walkways utilize a flat, continuous belt system that allows passengers to stand or walk while being propelled forward. These systems enhance pedestrian flow, reduce fatigue, and improve accessibility for individuals with mobility challenges. Moving walkways can be designed for various speeds and styles, including automatic and manual operation, and may include safety features such as handrails and emergency stop buttons.
