Horizontal Pressure Leaf Filter is intended for purification of edible and technical plant oils on different production stages (primary purification, winterization). Horizontal Pressure Leaf Filter can be used for purification of other similar carbon steel friendly liquids. Horizontal Pressure Leaf Filter consists of the horizontal tank with a removable cover. For sealing of the framing joint and the cover a spacer is used, which is tightened by turning of a bayonet-type ring by means of two hydrocylinders of the valve. Taking of the cover is performed by means of the hydrocylinder also. Horizontal Pressure Leaf Filter elements are removable vertical leafs tied up on the top by means of a bundle retainer. At the bottom the filter leafs are furnished with connections meant for taking of the filtrate into the gathering main and then to the pipe-line.
