The global Horizontal Regenerative Thermal Oxidizer market size is predicted to grow from US\$ 271 million in 2025 to US\$ 323 million in 2032; it is expected to grow at a CAGR of 2.6% from 2026 to 2032.

Regenerative thermal oxidizers are air pollution control devices used by industrial manufacturers to remove VOCs from process exhaust air. There are different types: two bed RTO, three bed RTO, rotary RTO.

Horizontal Regenerative Thermal Oxidizer is a high-efficiency waste gas treatment equipment that has attracted much attention in the field of environmental protection. Its working principle is to use ceramic regenerators to oxidize and decompose harmful substances in organic waste gas at high temperature, converting them into harmless water vapor and carbon dioxide. This technology not only effectively reduces the emission of harmful gases, but also has the advantage of energy saving because it can recover and reuse the heat energy generated during the combustion process, reducing operating costs.
