HAP is a type of pneumonia that is caused after 48 hours of hospitalization. HAP is one of the major challenges faced by the public healthcare system today. The disease is the second most common type of hospital-acquired infections. Pneumonia is an inflammatory condition of lungs and mainly affects the microscopic air sacs called alveoli. This is primarily caused by infection by bacteria or viruses and sometimes with other microorganisms. It can be mainly distinguished on how the infection was acquired.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
