The global Hospital Logistics Robots market size is predicted to grow from US\$ 507 million in 2025 to US\$ 866 million in 2032; it is expected to grow at a CAGR of 8.2% from 2026 to 2032.

In 2025, global Hospital Logistics Robots production reached 18.5 thousand units, with an average selling price of USD 28 thousand per unit, production capacity of 24 thousand units, and gross margin of 32%.

Hospital logistics robots are autonomous mobile robots (AMRs) operating within hospital environments to transport medications, laboratory samples, sterile supplies, meals, linens, and medical waste between hospital departments. These robots typically integrate autonomous navigation systems, elevator integration systems, fleet management software, and obstacle avoidance systems to automate internal hospital logistics and are an important part of smart hospital logistics systems.

The hospital logistics robot market lies at the intersection of medical service robots and indoor logistics robots, with demand mainly driven by large hospitals and smart hospital projects. With rising labor costs, increasing demand for hospital logistics automation, and the development of smart hospitals, the penetration rate of hospital logistics robots continues to increase. The global market is mainly concentrated in Europe, North America, Japan, and China. Autonomous Mobile Robots (AMRs) dominate the market, and industry barriers mainly include navigation technology, fleet management systems, elevator and access control integration capabilities, and hospital project implementation experience.
