A Hospital Variable Area Flow Meter is a device used in medical settings to measure the rate of flow of gases or liquids, particularly in hospital applications. It consists of a tapered tube with a float or piston that moves up and down depending on the flow rate. As the flow increases, the float rises, and as it decreases, the float lowers. The position of the float within the graduated scale indicates the flow rate, providing a visual measurement. This type of flow meter is commonly used for monitoring the flow of oxygen, anesthesia gases, and Others medical gases or liquids in hospitals, ensuring precise control and delivery.
