## Abstracts

The global Hospitality Distribution Solution market size is predicted to grow from US\$ 3543 million in 2025 to US\$ 6450 million in 2032; it is expected to grow at a CAGR of 9.1% from 2026 to 2032.

Hospitality Distribution Solution refers to a software and service platform for the hotel and accommodation industry that enables unified management, real-time synchronization, order write-back, and controllable distribution governance of room availability, inventory, pricing, restrictions, and content across direct sales channels (official website/APP/mini-program/call center), OTA, meta-search, GDS/corporate travel, wholesale/B2B channels.

### Gross Margin Levels

Hotel delivery solutions generally exhibit a structure of 'high-margin SaaS + medium-margin transaction/connectivity services.' Core software modules such as Channel Manager, CRS, and Booking Engine demonstrate significant economies of scale, with typical SaaS gross margins maintained at 70%-90%. However, when vendors provide extensive channel connectivity hosting, interface adaptation, content mapping (room type/price/policy), 24/7 operational SLAs, and transaction-based distribution services, higher delivery and support costs are added, resulting in an overall gross margin typically falling between 60% and 85%. As platforms further productize connectivity and rule governance (unified channel rules, real-time inventory consistency, automated auditing, and anomaly alerts), unit property delivery costs decrease, and the industry's gross margin center is expected to remain stable with a moderate upward trend.

### Industry Drivers

The underlying driver of industry growth is the hotel industry's continued push to increase direct bookings and controllable distribution amidst high channel commissions and traffic uncertainty. On one hand, hotel groups are strengthening their membership and direct booking capabilities to reduce reliance on OTAs (the industry generally mentions OTA commissions reaching 15%-25%), making 'official website direct booking engine + meta-search direct connection + price and inventory consistency' a key focus of technology procurement. On the other hand, the increased number of channels brings risks of price discrepancies, overselling, and inconsistent room availability, making channel management and CRS the foundation of distribution. When hotels need to simultaneously cover OTAs, GDS, meta-search, and wholesale distribution, the importance of omnichannel rules, real-time synchronization, and centralized governance further increases. Coupled with recent regulatory focus on platform-based 'traffic gates' and competitive order (such as changes in regulatory obligations for large booking platforms), hotels are more inclined to use their own distribution technology stacks to enhance bargaining power and risk resistance, driving the continuous penetration and upgrading of distribution solutions.
