## Abstracts

The global Hot Air Incubator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A hot air incubator is a laboratory device designed to provide a controlled environment with a steady temperature by using dry, heated air for the incubation of samples. Unlike humidity-controlled incubators or those that maintain specific gas concentrations (like CO<sub>2</sub> incubators), hot air incubators rely solely on dry heat for temperature control. This makes them suitable for various microbiological, biochemical, and clinical laboratory applications.
