The global Hot Air Steriliser market size is predicted to grow from US\$ 292 million in 2025 to US\$ 388 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

In 2025, global hot air sterilizer production reached approximately 230 k units, the average price is 1300 usd/unit. Hot air sterilizer is a kind of equipment which uses high temperature dry air to sterilize articles. It can effectively kill bacteria, viruses and other microorganisms by circulating hot air to make the articles reach a specific high temperature and maintain it for a certain time, and can be used to remove pyrogens (pyrogens are usually some metabolites produced by microorganisms, such as endotoxin, whose chemical nature is complex and can cause reactions such as fever; dry heat sterilization destroys these substances by high temperature oxidation).

The annual production capacity of a single hot air sterilizer production line is typically 8,000-10,000 units per year, with a gross profit margin of around 28%.

United States market for Hot Air Steriliser is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
