The global Hot Bimetallic Strip market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Hot Bimetallic Strip refers to a composite strip material that is firmly bonded together by two (or more) metal or alloy component layers with different thermal expansion coefficients. The alloy layer with a larger expansion coefficient is called the active layer, and the alloy layer with a smaller expansion coefficient is called the passive layer. An intermediate layer can be added between the active layer and the passive layer to adjust the resistance. When the ambient temperature changes, due to the active layer The expansion coefficient is different from that of the passive layer, resulting in bending or rotation.
