The global Hot Feed Extruders market size is predicted to grow from US\$ 4482 million in 2025 to US\$ 7503 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

In 2025, global sales of hot-feed extruders reached 29,000 units, with an average selling price of US\$158,000 per unit. Global total production capacity in 2025 was approximately 34,000 units, with an average industry gross margin of about 31%. Hot-feed extruders are industrial processing equipment that uses materials in a high-temperature molten state for direct continuous extrusion molding. They are widely used in the production of rubber, plastics, cable sheaths, tire semi-finished products, sealing materials, and polymer composite materials. This equipment uses the shearing and conveying action generated by the rotating screw to continuously transport the heated and plasticized material to the die head, achieving continuous molding processing. It features high production efficiency, low energy consumption, good mixing uniformity, and suitability for large-scale continuous production. The equipment typically consists of a screw system, barrel, heating and cooling system, reduction drive device, hydraulic system, and PLC control platform, which can achieve precise temperature control and stable pressure output according to different process requirements.

The upstream sector primarily involves suppliers of alloy steel, servo motors, speed reducers, bearings, heating elements, hydraulic systems, PLC controllers, wear-resistant screws, and precision mechanical parts. Downstream consumption mainly comes from tire manufacturing, plastic products, rubber seals, wire and cable, automotive parts, and polymer material processing industries. With the continued growth in demand for new energy vehicles, high-performance tires, environmentally friendly plastic materials, and intelligent manufacturing, the market for high-efficiency continuous extrusion equipment is constantly expanding. Future products will develop towards larger scale, energy efficiency, intelligent temperature control, high torque,

continuous unmanned operation, and digital production. Meanwhile, green material processing, high-end rubber and plastic products, and industrial automation upgrades will continue to bring new market demands and business opportunities.
