According to this study, the global Hot Forging Services market size will reach US$ 2297 million by 2031.

Hot forging services refer to a manufacturing process where metal is shaped by applying compressive forces at temperatures above its recrystallization point, typically close to or exceeding half of its absolute melting temperature. Hot forging involves heating metal to a malleable state without melting it. The heated material is then placed into a precision die and shaped under high pressure. This process ensures the metal conforms to the desired shape while maintaining excellent mechanical properties. This technique is ideal for producing high-strength components with complex geometries, leveraging the plasticity of heated metals to achieve precise forms. Common materials used include steel, aluminum, titanium, and various alloys.

United States market for Hot Forging Services is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
