Hot knife cutters are used for cutting heat-soluble materials such as plastic, acrylic, nylon, polyester, styrofoam, and polyvinyl chloride, etc. They are often used in DIY, handicrafts, and gardening situations.

A hot knife cutter cuts heat-soluble materials by heating the blade with the power of electricity. Although heat-soluble materials can be cut with ordinary scissors or cutters, hot knife cutters use the power of heat to speed up the cutting process and produce a smooth, clean cut. Nylon and polyester materials are welded to the cut surface, so there is no risk of fraying after cutting. Another feature of this type of heat cutter is that it does not easily produce shavings or other debris.

A hot knife cutter can be used to cut plastic and plastic bottles for crafts, and to cut acrylic and styrofoam into desired shapes. It is also easy to cut nylon and polyester fabrics, ropes, and nets, as well as cell trays and plug trays used in gardening.

A hot knife cutter is also used for weathering plastic models. Hot knife cutters can be used to create scars caused by bullets or beam weapons. They are also useful for disposing of large plastic products and Styrofoam, as they can be easily disassembled.

United States market for Hot Knife Cutter is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Hot Knife Cutter is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
