The global Hot Melt Adhesive Melter market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

A hot melt adhesive melter, also known as a hot melt glue melter or hot melt glue machine, is a device used to melt and dispense hot melt adhesives. Hot melt adhesives are solid materials that melt at high temperatures and become liquid when heated. The melter is designed to heat the adhesive to its melting point and maintain it at a consistent temperature for application.

Hot melt adhesive melters typically consist of a heating element, a temperature control system, a reservoir or hopper for holding the adhesive, and a dispensing mechanism. The heating element heats the adhesive, which is placed in the reservoir or hopper. The temperature control system ensures that the adhesive is heated to the correct temperature for application and maintains a consistent temperature throughout the process.

The dispensing mechanism, often a nozzle or applicator gun, allows the melted adhesive to be applied to the desired surface. The adhesive is typically dispensed in a controlled manner, either manually or through automated systems, depending on the specific application requirements.

Hot melt adhesive melters are commonly used in various industries, including packaging, woodworking, product assembly, and textiles. They offer fast and efficient
