Hot melt equipment, as the name suggests, is used for the application of hot melt adhesives on the operational surface. Hot melt adhesives (HMA) are thermoplastic adhesives, also known as hot glue. These adhesives are generally applied through hot melt glue guns or hot melt equipment. To heat and melt the thermoplastic glue, the equipment uses a continuous heating option and when it is pushed with the mechanical trigger arrangement/gun or by pressure from hand, the glue is squeezed out of the heated nozzle, which is hot enough to burn skin. It is sticky when hot, and solidifies over a few seconds (up to one minute). Hot melt thermoplastic glue can also be applied by spraying or dipping.
