The global Hot Retreaded Automotive Tires market size is predicted to grow from US\$ 510 million in 2025 to US\$ 639 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

Hot Retreaded Automotive Tires refers to the remanufacturing process of using a reusable tire carcass that has been inspected, ground, and repaired as a base, adding uncured rubber to the tread area, and then placing it in a rigid mold with a specific tread pattern for heating and vulcanization. This process allows the new tread and the old carcass to re-bond, forming a reusable tire. The process is similar to that of new tire vulcanization, resulting in better appearance consistency, tread pattern forming precision, and overall integrity. It is used in truck and bus tires, and light truck/SUV tires. The upstream of the industry chain mainly includes retreadable tire carcasses, natural rubber, synthetic rubber, carbon black, steel wire, vulcanizing agents, accelerators, antioxidants, tread compounds, rubber formulations, testing equipment, grinding equipment, extrusion equipment, molds, and vulcanizing presses. The midstream involves tire carcass inspection, grinding, repair, rubber coating, molding vulcanization, dynamic balancing, and final inspection. The downstream mainly serves logistics fleets, bus companies, and freight and cold chain enterprises. The gross profit margin is approximately 20%-35%.
