A Hot Runner System for injection molding is a crucial component used in plastic injection molding processes to efficiently deliver molten plastic into the mold cavities. Unlike traditional cold runner systems, a hot runner system keeps the plastic in a molten state within heated channels until it reaches the mold, which reduces material waste and cycle times. This system enhances the precision and quality of molded parts, enables faster production rates, and improves overall efficiency by minimizing scrap and reducing the need for post-processing. Hot runner systems are widely used in the production of complex and high-volume plastic components across industries such as automotive, electronics, and consumer goods.
