The global Hot Upsetting Machine market size is predicted to grow from US\$ 222 million in 2025 to US\$ 311 million in 2032; it is expected to grow at a CAGR of 3.5% from 2026 to 2032.

In 2025, the global production of hot extrusion presses reached 1,136 units, with an average price of approximately US\$200,000 per unit. The global annual production capacity of hot extrusion presses was approximately 1,550 units, with a gross profit margin of approximately 28.2%. A hot extrusion press is a specialized piece of equipment used for hot extrusion forming of metal, primarily for producing complex-shaped, high-precision metal parts (such as copper alloy valves and faucet fittings). Its working principle involves heating the metal billet to a red-hot state (typically 650-720?), then placing it in a mold, and applying high pressure to cause plastic deformation, thereby forming the desired part. Hot extrusion presses combine the advantages of precision forging and hot extrusion, featuring high material utilization, high part strength, and good surface quality. They are core equipment for achieving efficient and high-quality production in the hardware manufacturing and forging industries. The upstream of hot extrusion presses includes high-metal bar stock, high-precision machine tool spindles, and servo/hydraulic units; the midstream consists of hot extrusion press manufacturers; and the downstream is mainly used in the automotive, aerospace, and machinery manufacturing industries.
