The global Hotel Contactless Check-in Software market size is predicted to grow from US\$ 992 million in 2025 to US\$ 2939 million in 2032; it is expected to grow at a CAGR of 17.1% from 2026 to 2032.

Hotel Contactless Check-in Software is a digital solution designed for the hospitality industry to enable hotel guests to complete the check-in process without in-person interaction with front desk staff. It typically integrates with hotel property management systems (PMS) and supports multiple access channels such as mobile apps, WeChat/Alipay mini-programs, or self-service kiosks. Functions include pre-arrival information submission (ID verification, room preference selection), digital key issuance, deposit payment, and electronic invoice generation, aiming to streamline the check-in workflow, reduce guest waiting time, and enhance hygiene safety and service efficiency.

The digital transformation of global travel and hospitality has driven the rapid adoption of contactless check-in software.

Post-pandemic, user demand for safe and fast check-in has permanently increased.

Cloud deployment, PMS integration, and mobile compatibility have become key competitive advantages.

High-end and chain hotels are leading the charge, but demand is also growing rapidly for small and mid-sized hotels.

The Asia-Pacific region, particularly the Chinese and Southeast Asian markets, will be future growth engines.
