Hotel contactless check-in is a process that allows guests to check-in to their hotel room without having to physically interact with hotel staff or touch surfaces such as check-in kiosks or registration cards. This type of check-in typically involves the use of digital technology, such as mobile apps or self-service kiosks, to complete the check-in process. With contactless check-in, guests can use their mobile devices to check-in, access their room key, and even make room service requests. This helps to reduce the need for face-to-face interactions with hotel staff and minimize the risk of spreading germs or disease. In addition to being more hygienic, contactless check-in can also save guests time and streamline the check-in process, making it more convenient and efficient. The most critical component of contactless check in lies in payments and digital authorizations enabling guests to complete all payment processing, passport scanning, etc. from their mobile device without the need for bureaucratic paperwork upon arrival at their destination (i.e. your hotel).
