The global Hourglass Springs market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Hourglass springs look like an hourglass or barbell, hence the name. Hourglass springs may be referred to as concave springs, barbell springs or hourglass springs. These springs have larger diameter coils at the end and much smaller diameter coils in the middle. Hourglass springs tend to be visually appealing and provide extra stability, especially in abstract spaces.

In various industries such as automotive, aerospace, and electronics, there is a rising demand for lightweight materials to improve fuel efficiency, performance, and overall product design. Springs made from lightweight materials like alloy steels, titanium alloys, and composite materials are gaining popularity, as they offer strength and durability while reducing weight. Advanced materials, including shape memory alloys (SMAs), high-performance alloys, and polymer-based composites, are being used in spring manufacturing. These materials offer superior mechanical properties and can be tailored to specific industry requirements, such as high-temperature resistance, corrosion resistance, and fatigue resistance.
