Household Appliance Oxygen Sensor is a type of oxygen detection sensor used in household or small civil appliances. It is mainly used to detect oxygen concentration, oxygen content during combustion, or oxygen-deficiency risk, and convert changes in oxygen content into electrical signals for appliance control systems to perform combustion control, safety protection, oxygen concentration monitoring, or indoor air environment management. In terms of technology route, Household Appliance Oxygen Sensor mainly includes zirconia type, electrochemical type, and ultrasonic type. Zirconia type is more suitable for high-temperature or combustion environments, and can be used in gas water heaters, wall-hung boilers, ovens, steam ovens, and other equipment; electrochemical type is mainly used for room-temperature oxygen concentration detection; ultrasonic type is commonly used for oxygen concentration and flow detection in household oxygen concentrators.

The upstream mainly includes ceramic sensing elements, electrochemical gas sensing units, ultrasonic transducers, signal conditioning chips, PCBs, housings, connectors, and packaging materials. The midstream covers oxygen sensor design, packaging, calibration, and testing. The downstream is mainly oriented toward household gas
