The global Household Catalytic Combustion Gas Sensor market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Household catalytic combustion gas sensors use the thermal effect principle of catalytic combustion in the home environment. The detection element and compensation element are paired to form a measuring bridge. When the flame burns, the temperature of the carrier increases, and the resistance of the platinum wire inside it also increases accordingly, so that the balance bridge loses balance and outputs an electrical signal proportional to the concentration of combustible gas.
