The global Household Fresh Air System market size is predicted to grow from US$ 3760 million in 2025 to US$ 5323 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

A residential fresh air system is a mechanical ventilation device used in residential or commercial buildings. It achieves continuous exchange of indoor and outdoor air through forced air supply and exhaust. Its core function is to remove pollutants such as dust and pollen through filters when introducing fresh outdoor air. Optional heat recovery devices can be added to reduce indoor temperature and energy loss during ventilation, thereby ensuring indoor air quality and energy conservation.

The upstream mainly includes core component suppliers, providing fans, heat exchange cores, filter media, sensors, and control chips. The midstream consists of complete machine manufacturers and system integrators, responsible for main unit design, production assembly, software development, and providing system solutions. The downstream targets end-user channels and users, utilizing real estate project procurement, building materials retail, e-commerce platforms, etc., ultimately being applied in new residential buildings, the decoration market, and old building renovations.

In 2024, the global average price of a residential fresh air system was US$1130 per unit, with annual sales of approximately 3.24 million units and a global annual production capacity of around 3.5-3.6 million units. The industry's average profit margin was 25%-30%.

United States market for Household Fresh Air System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
