A household grid-connected inverter is a device used to convert direct current (DC) generated in a residence (such as from solar photovoltaic panels) into alternating current and directly feed it into the grid. It is a key component in a household photovoltaic power generation system, ensuring that the electricity generated by the sun can be used by household appliances or sold back to the grid. The main function of a household grid-connected inverter is to convert the direct current (DC) generated by photovoltaic power generation into alternating current (AC) that matches the voltage and frequency of the grid. They continuously monitor the voltage and frequency of the grid to ensure that the output current can be synchronized with the grid.
