A household heat meter is a device used by households or small commercial users to measure and record heat energy consumption. It accurately calculates the heat energy consumed by monitoring the temperature difference and flow rate of hot water or steam flowing through the heating system, and provides real-time heat usage data to users through a display. Household heat meters are usually used in conjunction with central heating systems to help users understand their own heat energy usage and charge according to actual consumption, thereby improving energy efficiency and reducing unnecessary energy waste. At the same time, it also helps energy management departments to monitor heat energy and manage charges.
