The global Hover Mower market size is predicted to grow from US$ 1906 million in 2025 to US$ 2492 million in 2031; it is expected to grow at a CAGR of 4.6% from 2025 to 2031.

The Hover Mower market has witnessed significant growth and evolution in recent years. Hover mowers, also known as air cushion mowers, have gained popularity due to their unique floating design and maneuverability. This market segment has experienced steady expansion as consumers seek efficient and convenient solutions for maintaining their lawns. Hover mowers utilize a cushion of air to glide smoothly over the grass, making them ideal for uneven or sloped terrain where traditional wheeled mowers may struggle. The market offers a wide range of hover mower options with varying cutting widths, power sources (electric or petrol), and cutting heights. Technological advancements have led to the development of more efficient hover mowers with improved cutting performance, reduced noise levels, and enhanced user safety features. The demand for hover mowers is driven by factors such as increasing urbanization, smaller lawn sizes, and the need for easy-to-use lawn care equipment. Additionally, environmental concerns and the desire for eco-friendly alternatives have contributed to the growing popularity of hover mowers, as they typically produce lower carbon emissions compared to gasoline-powered mowers. The Hover Mower market is expected to continue its upward trend as more homeowners and professional landscapers recognize the benefits of hover mowers in terms of maneuverability, versatility, and overall lawn maintenance efficiency.
