High-performance liquid chromatography (HPLC) is a technique in analytical chemistry used to separate, identify, and quantify each component in a mixture. It relies on pumps to pass a pressurized liquid solvent containing the sample mixture through a column filled with a solid adsorbent material. Each component in the sample interacts slightly differently with the adsorbent material, causing different flow rates for the different components and leading to the separation of the components as they flow out of the column.

The global HPLC Columns market size is projected to grow from US\$ 1950 million in 2024 to US\$ 2821 million in 2030; it is expected to grow at a CAGR of 6.3% from 2024 to 2030.
