High performance liquid chromatography (HPLC) is a chromatography technique in which the sample mixture is pumped at a high pressure, which further passes through a stationary phase column. The device HPLC has the potential to separate and differentiate the compounds dissolved in liquid in minute concentrations based on its size. HPLC fused silica tubes are used in these HPLC devices for transfer lines. Also, HPLC fused silica tubes are used for the analysis of volatile compounds and the HPLC fused silica tubes are highly inert, which helps in reproducible measurements. The HPLC fused silica tubes reduce the degradation of the sample and reduce peak tailing, which is visible during the results of integration of HPLC.
