High-speed rail is a type of rail transport that operates significantly faster than traditional rail traffic, using an integrated system of specialized rolling stock and dedicated tracks. HSR is a railway transportation system that runs at speeds of more than 150 mph and is currently considered one of the fastest, most environment-friendly, and safest modes of transport across the globe.

The global composites market for HSR is expected to witness rapid, but uneven, growth during the forecast period. The growth of the market is directly dependent on the development of HSR networks worldwide. As various major HSR projects are being planned in 2015 across China, Japan, Spain, Saudi Arabia, and Turkey, the demand for composites from the HSR sector is expected to grow rapidly.
