An HSS end mill is a tool used primarily for machining square metal or non-metal objects. Unlike a twist drill, which creates a circular hole, an end mill rotates and moves straight to enlarge a hole horizontally. End mills are made of two primary materials: HSS (high-speed steel) and cemented carbide. HSS end mills are common, while cemented carbide ones are better suited for cutting harder materials.

The global HSS End Mill market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
