The global HSS Threading Tap market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

High-Speed Steel (HSS) threading tap is a cutting tool used to create internal threads in metal materials, such as steel, aluminum, brass, and others. It is an essential tool in machining and manufacturing processes, enabling the creation of threaded holes that allow screws, bolts, or other threaded fasteners to be securely inserted and fastened.

The global market for HSS threading taps has been steadily growing due to the increasing demand from various end-use industries, including manufacturing, automotive, aerospace, construction, and metalworking. HSS threading taps are widely used in these industries for creating internal threads in metal components, making them an essential tool in machining and assembly processes. The demand for HSS threading taps is distributed globally, with major market regions including North America, Europe, Asia Pacific, and other parts of the world. Asia Pacific, particularly China and India, has been a significant manufacturing hub, driving the demand for HSS threading taps in the region. Europe and North America also have substantial markets, driven by advanced manufacturing industries. The market for HSS threading taps is expected to continue growing, supported by the ongoing industrialization, infrastructure development, and growth of the manufacturing sector. As technology advances, HSS threading taps may face competition from more advanced cutting tool materials. However, the cost-effectiveness and versatility of HSS taps will likely ensure their continued demand in various applications.
