The HUD projection unit is the core component of the HUD system and is responsible for projecting driving information into the driver's line of sight through optical technology. The projection unit integrates components such as a projector, a reflector, a projection mirror, an adjustment motor and a control unit. The HUD projection unit works similar to slide projection. It emits light information through the projector, reflects to the projection mirror through the reflector, and finally reflects to the windshield, forming a virtual image. The driver sees information as if it is floating on the road ahead, eliminating the need to look down at the dashboard.
