The global Human Fibrin Sealant Kit market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Human Fibrin Sealant Kit contains fibrinogen and thrombin, which imitates the common coagulation reaction mode, and quickly gels to form a fibrin film, thereby producing hemostasis and sealing effect. In terms of hemostasis, the expected hemostatic effect can be achieved without relying on the patient's coagulation function, especially for patients who have been using double-antibody drugs for a long time, heparinized patients, patients with coagulation factor deficiency, and patients with coagulation disorders. The formed fibrin network can effectively seal the wound, reduce adhesions and scars, and promote healing.
