The global Human Posture Recognition market size is predicted to grow from US\$ 730 million in 2025 to US\$ 1143 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

Human gesture recognition uses computer vision and deep learning techniques to detect and locate key points of the human body (such as the head, limbs, and joints) in images or videos, thereby accurately identifying and analyzing human movements, postures, and behaviors. It is widely used in motion analysis, human-computer interaction, intelligent monitoring, virtual reality, rehabilitation medicine, and other fields, and is a key foundation for intelligent perception and behavioral understanding.

With the rapid development of artificial intelligence and computer vision technologies, human gesture recognition is moving from the laboratory to industrial applications. The growing demand for contactless, real-time gesture sensing in scenarios such as smart security, fitness coaching, telemedicine, and behavior monitoring is accelerating the implementation of this technology. In particular, in smart sports and virtual reality, gesture recognition has become a key enabler for improving user interaction experience and motion tracking accuracy, attracting significant investment from companies and capital, and the market size is expanding year by year.

Concurrently, with the increasing computing power of terminal devices and the lightweight optimization of algorithms, human gesture recognition is gradually moving from high-performance servers to edge applications such as mobile devices, cameras, and wearables. This shift not only reduces deployment costs but also promotes its adoption in the consumer market, with emerging use cases such as AI fitness mirrors, virtual live streamers, action games, and home care emerging. In the future, gesture

recognition technology will be deeply integrated with multimodal sensing (such as voice, gestures, and eye tracking) to build a more natural and intelligent human-computer interaction ecosystem.
