Human Presence Detection Radar is a type of radar technology designed to detect and identify the presence of humans in a given area. It operates by emitting electromagnetic waves, which bounce off objects, including human bodies, and return to the radar sensor. The system analyzes these reflections to determine the presence, movement, and even the approximate location of individuals. Commonly used in security, smart home systems, and automated lighting applications, this radar can function in various environments, even under conditions where optical sensors might struggle, such as low light or through obstructions like walls or curtains.
