The global Human Presence Detection Sensor market size is predicted to grow from US$ 3783 million in 2025 to US$ 5604 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

Human presence detection sensors are intelligent sensing devices used to detect the presence of human beings or other living organisms in a space. They utilize technologies such as infrared, millimeter-wave radar, ultrasound, or vision to detect human thermal radiation, micro-movements, respiration, or morphological characteristics, converting the sensing results into electrical signals or data output. These sensors can identify the presence, activity, or occupancy of human beings and are widely used in smart lighting, smart homes, building automation, security systems, and vehicle monitoring, serving as a crucial foundational sensing component for intelligent space management and energy-saving control. In 2024, sales of human presence detection sensors exceeded 50 million units. The price of sensors using different technologies varies significantly, with sensors using dual technologies costing several times more than those using a single technology.

The Human Presence Detection Sensor Market is experiencing significant growth, with major sales regions including North America, Europe, and Asia Pacific. The market is characterized by a high level of concentration. The increasing demand for smart homes and buildings, as well as the growing emphasis on energy efficiency, are driving the market growth. However, there are also challenges such as the high cost of sensors and the lack of awareness among consumers about the benefits of human presence detection technology. Despite these challenges, there are ample opportunities for market expansion, particularly in emerging economies where the adoption of smart technologies is on the rise. Overall, the Human Presence Detection Sensor Market is
