The global Human Presence Sensing Radar market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Human Presence Sensing Radar (HPSR) refers to a type of radar technology that is specifically designed for detecting and sensing the presence of humans in an area. HPSR systems utilize radar waves to detect the minute changes in the environment caused by the movement or presence of a person. Unlike traditional radar systems that are used for long-range detection or tracking purposes, HPSR operates at shorter distances and focuses on detecting relatively small movements and presence of human beings. It is particularly useful in applications where traditional motion sensors or cameras might not be suitable, such as in low-light conditions or through obstacles. HPSR systems typically work by emitting radar waves and then analyzing the reflected signals to determine if there is a human presence. These radar waves are able to penetrate through various materials, including walls and furniture, providing the ability to detect humans even if they are not visible to the naked eye. The technology behind HPSR involves sophisticated algorithms that can differentiate human movements from other environmental factors like vibrations, temperature changes, or small animals. This allows the system to filter out false alarms and provide accurate detection of human presence. HPSR can be used in various applications, such as home automation, security systems, healthcare monitoring, and automotive safety. For example, it can be used to automatically turn on lights or adjust temperature settings when a person enters a room, to enhance security by triggering alarms when unauthorized individuals enter restricted areas, or to enable advanced driver-assistance systems (ADAS) in cars to detect pedestrians or cyclists near the vehicle. Overall, human presence sensing radar provides a reliable and efficient method for detecting and tracking human presence in

real-time, enabling various applications that require accurate and timely information about the presence of individuals.
