The global Human Rabies Immunoglobulin (IM) market size is predicted to grow from US\$ 329 million in 2025 to US\$ 401 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

Rabies immunoglobulin (RIG) is a medication made up of antibodies against the rabies virus. It is used to prevent rabies following exposure. Human Rabies Immunoglobulin (IM) is rabies immunoglobulin antibody by the high price of healthy human plasma protein low temperature ethanol separation or other separation methods approved separation and purification, and by virus removal and inactivation treatment is made. Mainly used for rabies or other crazy animal bites, scratches patient's passive immunization. In this report, we study ERIG (Equine Rabies Immunoglobulin) and HRIG (Human Rabies Immunoglobulin)

The rising incidence of rabies, especially in developing countries, is a key driver of the human rabies immunoglobulin market. Rabies remains a significant public health concern, particularly in regions where animal vaccination programs are insufficient. Post-exposure prophylaxis (PEP), which includes human rabies immunoglobulin, is critical for preventing the virus after a bite from a rabid animal. Increasing awareness of rabies prevention, government initiatives, and partnerships with international health organizations have boosted demand for human rabies immunoglobulin in both rural and urban areas.

A major challenge in the human rabies immunoglobulin market is its limited availability and high cost, particularly in low- and middle-income countries where rabies is most

prevalent. The production of immunoglobulins requires advanced technology and biological materials, making it costly and sometimes scarce in regions with insufficient healthcare infrastructure. Additionally, the need for timely administration after exposure poses logistical difficulties, especially in remote areas, where access to healthcare facilities may be delayed, potentially limiting the effectiveness of the treatment.

Asia-Pacific is expected to experience the highest growth in the market during the forecast period.
