Human Trypsin is an enzyme belonging to the serine protease family that plays a crucial role in protein digestion. It is produced in the pancreas and involved in the breakdown of proteins into smaller peptide fragments within the small intestine. Specifically, Human Trypsin cleaves peptide bonds at the carboxyl side of the basic amino acids lysine and arginine. It is an essential component in various laboratory processes, including cell culture, biopharmaceutical production, and protein analysis techniques such as peptide mapping and protein identification via mass spectrometry.

The global Human Trypsin market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
