An HV Bushing is mainly used in an electrical equipment, where it is means for passing an electrical conductor through a grounded object without causing short circuit. As the electrical strength varies in the conductor due to frequency fluctuation, leakage paths may develop within the insulation. If this leakage overcomes the dielectric strength of the insulation, it may puncture the insulation and permits the current to conduct the nearest earthed material causing burning and arching.

The Global HV Bushing Market is driven by the increasing need of reliable electric supply & subsequent investment in transmission & distribution network, grid expansion, and developing safe electrical infrastructure.
