However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of HVAC VRV System. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the HVAC VRV System market.

VRV system is also known as Variable Refrigerant Volume system and is extensively used in commercial applications including malls, restaurants, offices, and others owing to their compatibility with the environment and less power usage. VRV is a multi-split type of system in which 60 or more AC units can be connected to a single outside unit, and refrigerant is controlled by the remote operation and manually. In central AC systems, where the need for cooling or heating at particular spots in the office is much harder, the VRV system offers total air conditioning control to the user.

Rising adoption of air conditioning units globally owing to changing lifestyle preferences of consumers and increasing commercialization in emerging economies is the factor driving the demand for VRVs. Furthermore, the reduction in workspace for SMEs is a
