High Voltage Direct Current (HVDC) systems are used for the efficient long-distance transmission of electrical power. An HVDC transformer is a critical component in such systems, used to convert the voltage levels of the AC side to the DC side (or vice versa), as well as to provide electrical isolation between the two.Pressboard is one of the most common materials used for insulation in HVDC transformers, particularly in the form of oil-impregnated pressboard. This material is often used in conjunction with other insulating materials like oil or ester fluids to provide both electrical insulation and mechanical support in high-voltage environments. This report covers insulation paper, pressboard and components for HVDC transformer.

United States market for HVDC Transformer Insulation Pressboard is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for HVDC Transformer Insulation Pressboard is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
