The global Hybrid ATL-AFP Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Hybrid ATL-AFP Machine is a piece of composite manufacturing equipment that includes dual-process systems - ATL (Automated Tape Laying) and AFP (Automated Fiber Placement) - in one platform.

Automated tape laying (ATL) is one of the most well-established automated manufacturing techniques for composites. Wide unidirectional tapes are laid onto a part mould using a loaded roller system with varying degrees of articulation, depending on the complexity of the part being manufactured.

Automated fiber placement (AFP), also known as advanced fiber placement, is an advanced method of manufacturing composite materials. These materials, which offer lighter weight with equivalent or greater strength than metals, are increasingly used in airframes and other industrial products.

United States market for Hybrid ATL-AFP Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
