Hybrid Automated Control System refers to a control system that integrates both continuous and discrete dynamics. It is a system where time-driven and event-driven dynamics interact, generating a mixture of continuous and discrete signals. This type of system is characterized by the presence of both analog and digital components, and it is particularly relevant in applications where a physical plant is controlled by a finite set of controls. Hybrid systems provide a framework that enables the designer to extract the desired properties of a system while ignoring irrelevant details. They are suitable for the design of complex embedded and networked control systems, which are often hard to analyze with traditional tools. A hybrid automaton, which is a key concept in hybrid systems, consists of locations, transitions, invariants, guards, n-dimensional continuous functions, jump functions, and synchronization labels.

United States market for Hybrid Automated Control System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Hybrid Automated Control System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
